

Euronova - Temporary Exhibition Security

Borrowing a loan or two from a national gallery or overseas does add something special to your museum BUT it brings responsibilities too, especially for the objects' security and protection too. A government indemnity audit might bring the requirements for day time alarms, but for one or two pieces the ideal system using radio has been beyond the pockets of many until now.....

Euronova presents; **GalleryAlert™** the simple, wirefree system to protect two show cases, paintings or sculptures with discrete sensors and so reduce risk of theft and damage to valuable works of art on display during open hours.

Available for rental or purchase; 2 sensors and one GalleryAlert™ receiver (with mains adapter fitted). Just find a suitable power point and plug it in.

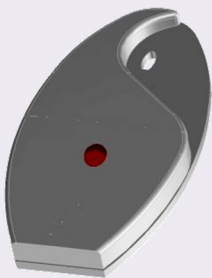

- standard system comes with siren fitted, alarms for 5 seconds to alert staff.
- choice of:
 - 1 or 2 non contact sensors (for behind painting or under bust or vase) and 1 or 2 ultrasound showcase sensors. Range to receiver approx. 20 to 50m.
- simple led alerts if a sensor needs repositioning.
- telephone support from Euronova included.

Further options available:

- link to a pager, other sensors, extension using repeaters...

GalleryAlert™ example sensors.....

IR Non-Contact (paintings and busts)

Size: IR NC: 79x39x8.5mm
Batt life: 2 years

Ultrasound for showcases

US: 95x47x24
9 months

GalleryAlert™ receiver, comes pre- programmed - Just plug in.

Receiver: 130x85x52 (incl siren)
Plugs into mains

Now the type of system used in the nationals has been miniaturized and is ready for your use. Operating on 868MHz the EU wide licence free channel for security systems.

Simple to use systems to improve security & safety....
